## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Takada'878 et al. in view of Taggart'188.

The Takada'878 et al. reference discloses a filling system for resin containers, with an implied method that would be inherent during normal use and operation of the system, comprising sterilizing a content (see col. 1, lines 25-29) and cooling the content to normal (see col. 2, lines 62-68), but does not disclose an exact filling temperature range of 50 to 60 degrees C. It would have been obvious to one of ordinary skill in the art at the time the invention was made to fill beverage at temperatures falling between 50 to 60 degrees C, since it has been well settled and held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. See *In re Aller*, 105USPQ 233. Furthermore, the Takada et al. reference fails to disclose a step of rinsing and sterilizing the resin container. Attention is now directed to the Taggart reference which discloses rinsing and sterilizing resin containers (see col. 2, lines 56-64) to achieve aseptic sterilization as required by FDA standards. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include a step of rinsing and

Art Unit: 3751

sterilizing the resin container in view of the teachings of the Taggart reference to achieve aseptic sterilization as required by FDA standards.

## Response to Arguments

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven O. Douglas whose telephone number is (571) 272-4885. The examiner can normally be reached on Mon-Fri 6:30-5:00.

The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571/272-1000.
